

# TEXAS GERIATRICIANS

*(Per 100,000 persons 65 and older)*

Since 2003, the population of Texans 65 or older has grown 69%.  
Meantime, the number of geriatricians serving that senior population has increased more than four-fold.

Senior population trend line would have produced 59 geriatricians (1.61 x 3,671,183)

Instead, Texas has 143 geriatricians (3.89 x 3,671,183)

The bottom line holds the 2003 geriatricians per senior population constant adjusting for population growth of those 65 and older.  
The top line is the actual number of in-state active geriatricians.

Numbers include those self-described as geriatricians, geriatric family practitioners, geriatric internists, geriatric psychiatrist, and geriatric general practitioners.
